Entering calvings

Fertility & reproduction · https://www.uniform-agri.com/knowledge-base/dairy/fertility-reproduction/entering-calvings/

When you enter a calving, sometimes special situations occur. For example, how should you report a second calf that is born later? Calving questions are frequently asked to the help desk. So, we want to explain a few different situations around special situations. In this tip from the help desk, we will talk about the following subjects:

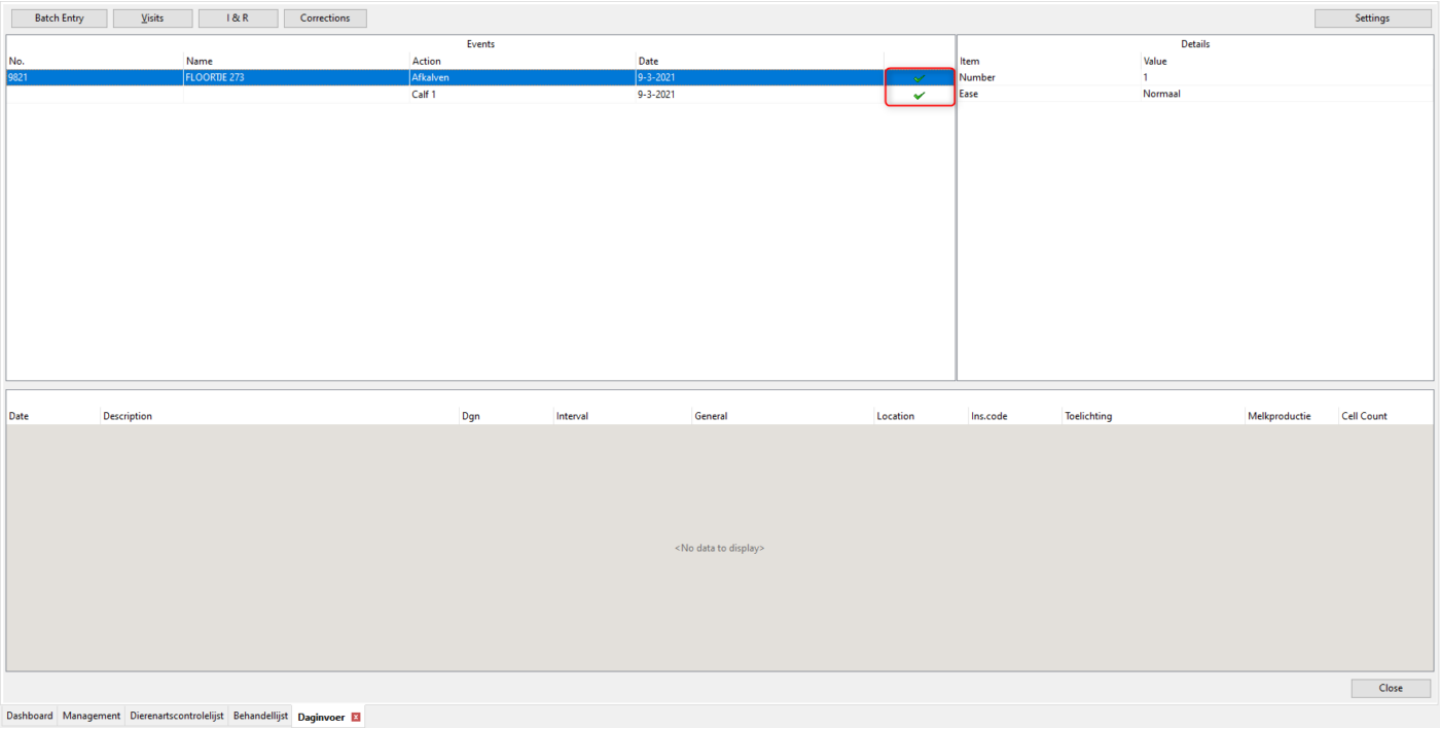

1) Enter a complete calving (daily entry)

2) Enter a missing calf again (twins)

3) A red cross behind the calving (daily entry)

1) Enter a complete calving (daily entry)

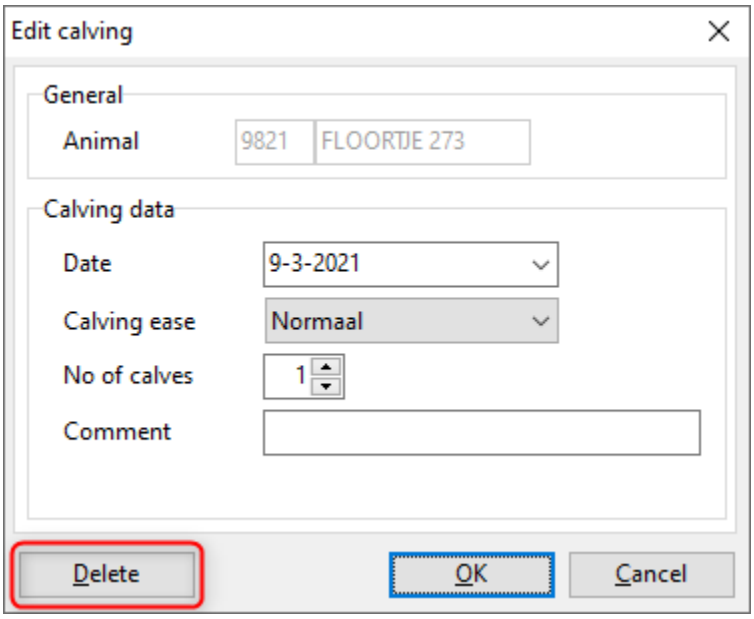

A calving is completed when you have two rows: one for the calving and one for the calf itself (with twins you have three rows). The calving row and the calf row(s) need to have a green check mark at the end:

2) Entering a missing calf again (twins)

Sometimes it occurs that a calving is entered without a calf, (or if there is one calf missing when you have twin) You can restore that like this:

Go to the **animal card** of the calved animal, “**[Reproduction]** tab” there you see the last calving, click on “**[Edit]**” (at the bottom left) and in this new screen, click on “**[Delete]**”:

Then you must re-enter the complete calving data at the **daily entry**, check carefully if the **eartag number** (which is automatically displayed) is correct at both calves (in case of twins).

3) A red cross behind the calving (daily entry)

When you enter a calving and you see a red cross at the end (instead of a green mark), then mostly there is an error regarding to an integrated system (example: De Velos or the T4C). The animal data of the calved animal does not match (between UNIFORM and the linked system). When you see this red cross, please contact our helpdesk.
