Automate Task – Create Backup

Program admin & maintenance · https://www.uniform-agri.com/knowledge-base/uniform/program-admin-maintenance/automate-task-create-backup/

It is important for every user that the UNIFORM program performs the automatic tasks properly and especially the automatic task **Backup**. If your PC always makes a backup at the chosen times and you have for example a computer crash (all data is normally lost), then we have a recent backup available. The backup in which all your animal data is stored!

Where can I find the automatic task backup and check if data safe is turned on?

First go to **[Automate]** (1), then you will see the **Automate Tasks**, click on the **Backup** task (2) here you can also see which period/time he creates a backup, click on the second tab **[Details]** (3). The box before **[DataSafe]** must be ticked:

In which situation will creating backup fail?

1. The PC is off or turns off

2. The hard drive of the pc goes in sleep mode (after…minutes)

In both situations your PC don’t make a backup. You can also see this by a blinking red 1 or 2 at the top right of your **Dashboard**.
